

COLOR CONTRAST

ADA 703.5.1 states: "Characters shall contrast with their background with either light characters on a dark background or dark characters on a light background." Signs are more legible for persons with low vision when characters contrast as much as possible with their background. Best Signs recommends contrast greater than 70%. The chart below shows color contrast for our standard paint colors when the copy color is black or white. For contrast of copy colors other than black or white please use our contrast calculator online at www.bestsigns.com/color_chart.html
